

WE GUARANTEE A RESPONSIBLE SUPPLY OF SAFE AND INNOCUOUS PRODUCTS

We will continue working with the same commitment as always

We are going through a unique situation in human history. The coronavirus pandemic has placed us in front of great challenges and much uncertainty, as it is impacting on every area of our global society, such as families, industries, markets, health and primary necessity services, among others.

In Grupo Lucci we are focused, today more than ever, on keeping alive our supply chains in order to fulfill, as the food processing industry that we are, with the role that in this context has been assigned to us, providing our products to all the community. We are applying, at each stage the productive processes, **the required actions in order to assure the continuity of our activities, ensuring as well, and above all, the health and safety of our people.**

We know that all **our products are** of high nutritional value and **ideal for people's diet.** That is why we committed ourselves to giving our greatest

effort to continue **guaranteeing our costumers the responsible sourcing of safe and innocuous products, with the same quality that has always distinguished us.**

Due to the significance of vitamin C for the strengthening of the immune system, the demand for citrus has grown on the last months, coming along with the context and the people's need of keeping as healthy as possible. For this reason, **through our lemons and their derivatives, today we have the possibility to contribute to the health of people as well.**

We want to thank all our collaborators for joining us at this difficult time, to continue working together, **taking care of each other and being very responsible,** both inside and outside the Company, with the full compliance of the prevention sanitary measures to stop the spread of this virus.

Our effort and commitment should fill us with pride today and always. **We count on you to be able to move forward, making a visible contribution to the country and the world.**
